

HIGHCO SAFETY LLC

A Proactive Safety Company

Drivers across North America have seen and used Highco Safety's Patented Boom Dog bar, and patented process. They know how it makes their job easier. But why? The following pages will show you ALL the uses of the bar, and how it will help your drivers get home safely each night. Here is why proactive safety is what it's all about.

Training Video

The patented claw and 3/4" cutout work great for prying pins. There is no pin it can't pop out.

The claw also works great for releasing chains. Sometimes chains can pinch, and be very difficult to remove. The Boom Dog Bar makes the job faster and easier.

Give yourself an extra 5' of distance from the most dangerous point of the container. The door. Extra leverage makes a world of difference. Feature works on most containers.

The most important feature of the bar, the prying feature. If the door does not release, drivers normally pull on the chain, or pushes open by hand, exposing arm and body to everything in the box. The prying feature will keep you safe at a distance.

If the door still does not open the bar is designed with an opening to fit the door. The patented punch will kick open the door without ever having to expose your body.

The opening fits like a glove over the door, one swift punching motion kicks open even the heaviest of doors.

The patented claw has a 3/4" opening that fits most liquid tight seals cleaning off the seal without ever climbing on the truck, and never getting your gloves dirty.

Container doors are heavy. No matter how well a container is built, they bend, and doors sag. Doors can be very difficult to close once they start to sag. The Boom Dog Bar lifts up saggy doors putting them back into a closed position.

Throw away your winch bar. The T Handle, or Pistol Grip part of the Boom Dog Bar puts you in a comfortable position allowing you to easily tighten your nylon ratchet to the CORRECT spot.

The Boom Dog Safety bar is a no-brainer to put in the hands of your drivers. It keeps them safe, reduces injuries, injury claims, and makes them faster at their jobs. With the Boom Dog as their new hand, your safety culture will change. For additional questions, contact us at
